

About **A+ CAT** Program

A+ CAT (Computer Assisted Tutoring) combines effective one-on-one instruction of the A+ Program with computer technology resource learning tools. This is a winning combination of a proven tutorial program built on over 25 years experience, CA State Approved for the last 9 years, coupled with the most innovative technology and learning mediums available to improve student achievement. A 10 week A+ C A T Tutorial program provides valuable learning of Language, Reading, Math, or Science skill instruction while helping students gain essential computer skills, all in the convenience of the student's home, local library, or community center.

Research

"Research has consistently shown that supplemental educational services have a positive impact on mathematics and reading achievement" (Zimmer, Gill, Razquin, Booker, & Lockwood, 2007) Schools are moving beyond a one-size-fits-all approach to education toward greater efforts to differentiate learning for each student. Similarly, for tutoring to truly personalize the learning process in more meaningful ways, A + C A T has blended face-to-face instruction with computer assisted resources to enhance the tutoring experience while improving student achievement. Students receive the individualized attention necessary for educational success as well as encouragement to develop academic confidence. Secretary of Education, Arne Duncan, stated that "through technology we can create more effective and more engaging learning experiences for all of our students". Motivation is key to learning and with a FREE laptop as a supplemental learning tool, students are given the opportunity to acquire the necessary computer skills to excel in school and be college ready. A+ C A T is fun, interactive, and educational!

FREE Laptop Provided

When a student completes our 10 week program, we give you a FREE laptop! There is no additional cost!

Cost Benefit

In 10 weeks a child will master 4 major, grade-level specific academic subject goals found deficient during our Pre-Assessment. In addition, the student will be proficient using a computer to access resources needed to continue learning and advance further academically now and in the future. The cost of this intensive 10 Week Academic Computer Assisted Tutorial Program is only \$1,200. Upon completion, a child receives a FREE laptop loaded with grade, skill and subject specific tools to continue to practice valuable skills taught during the A+ C A T Program.
